

COVID-19 Weekly Report

Oregon's Weekly Surveillance Summary
Novel Coronavirus (COVID-19)

Oregon Public Health Division

Published July 22, 2020

Background

COVID-19 Weekly Report data will be finalized every Sunday at 11 p.m. PDT, and the report will be published on Wednesday. **Please note that the data reported here are continually being updated. For daily up-to-date information visit the [OHA COVID-19 web page](#).**

As of 11 p.m. Sunday, July 19, there have been 14,847 cases of COVID-19 reported to the Oregon Health Authority. Of these cases, 762 (5.1%) are presumptive cases—i.e., people without a confirmatory laboratory test who have COVID-19-like symptoms and had close contact with a confirmed case. Though not confirmed by a laboratory test, presumptive cases have a high likelihood of having COVID-19 because of the specific nature of the symptoms and known exposure. Presumptive cases are encouraged to seek testing to confirm that they do have COVID-19. Presumptive cases who test positive are recategorized as confirmed cases.

These data represent a snapshot of COVID-19 risk factors and clinical and demographic characteristics, and include data on cases with pending investigations. Not all cases have been interviewed at the time of this report. The data shown in this report come from Oregon's electronic disease surveillance system for reportable diseases.

During the week of July 13–July 19, 37,137 people were tested for COVID-19 in Oregon, and 6.6% of them had a positive result. Not all positive tests represent new cases; some are from specimens collected from people who had already been counted as presumptive cases. The number includes tests done at all locations, including commercial non-hospital-based laboratories, hospital laboratories and Oregon State Public Health Laboratory.

Weekly Report Summary

The recent COVID-19 resurgence continued during the week from Monday, July 13, through Sunday, July 19. OHA recorded 2,409 new cases of COVID-19 infection, a 26% increase from the previous week. In addition, 25 Oregonians were reported to have died, after 22 deaths the preceding week. Statewide, cumulative reported COVID-19 cases have reached 14,847 (35 cases per 10,000 Oregonians), and 262 Oregonians (0.6 deaths per 10,000 Oregonians) are known to have died with COVID-19 since the beginning of the outbreak. Recent data on mortality in Oregon, including deaths related to COVID-19, are available at <https://public.tableau.com/profile/oha.center.for.health.statistics#!/>.

The percentage of tests positive increased again to 6.6% from 6.2%. [Hospitalizations](#) have increased since the beginning of June but recent daily admissions of 15–20 are still below earlier peaks in March and April of 20–25 per day despite reported daily case counts more than three times as high. These circumstances are probably due principally to 1) detection and reporting of a higher proportion of all infections that occur (more widespread testing; testing of asymptomatic contacts of known cases); and 2) actual increases in underlying rates of infection among younger people who are at lower risk of hospitalization than are those in older age groups (Figure 5). [ICU bed usage](#) remains well under capacity statewide.

Large outbreaks (Table 7) have contributed a diminishing proportion of recent cases, and sporadic cases have increased (Figure 1), consistent with diffuse community spread. Though not definitive, a diminishing proportion of cases that are linked to outbreaks, cluster and household spread, is consistent with increasingly timely and effective isolation and quarantine messages from public health investigators and tracers. Slightly fewer than 95% of cases identified on most recent days were [contacted by local public health staff within 24 hours](#), suggesting that more investigatory resources are needed.

* Does not include antibody (serology) tests.

Oregon's Weekly Surveillance Summary
Novel Coronavirus (COVID-19)

Oregon Public Health Division

Published July 22, 2020

Clinical Characteristics, Risk Factors and Demographic Characteristics

Figure 1 shows the number of cases reported by week of onset and epidemiologic link. Figure 2 provides information on signs and symptoms from all COVID-19 cases. Of 14,847 cases, 11,224 (75.6%) reported having signs and symptoms of COVID-19. The most commonly reported symptoms are cough (n=7,685, 51.8%) and headache (n=6,980, 47.0%). Figure 3 provides information on the percentage of COVID-19 cases that report symptoms. Figure 4 provides information on risk factors from all COVID-19 cases. The most common risk factors are having contact with a known COVID-19 case prior to symptom onset (n=9,770, 65.8%) and having underlying medical conditions (n=6,926, 46.6%). Note that a person may report more than one sign/symptom or risk factor.

Figure 1. Epidemiologic link of COVID-19 cases by week of onset

Where displayed by week in this report, case data are categorized by week of reported symptom onset, not by date of case report. This results in reduced numbers in the most recent week or more due to reporting lags.

Epidemiologic link designations

Sporadic: Cases who do not have known exposure to another case or outbreak.

Outbreak: Cases who have a shared, defined exposure with at least one other case. For example, a defined exposure could be an event, a workplace, a congregate facility, etc.

Cluster: Cases who had contact with another case, but the exposure is not well defined. For example, cases from two households who interacted many times prior to illness onset.

Household: Cases who were exposed to another case in their household.

Close contact: Cases who were exposed to another case, not in their household. This designation was added on 7/15.

Due to the lag between case reporting and case investigation, the proportion of cases categorized as sporadic is high in the most recent week or more; some of these cases will be recategorized after investigation is completed.

*Congregate living situations include, but are not limited to, long-term care facilities, group homes, prisons, and shelters. Data include people with confirmed cases who live or work in congregate living situations.

**Direct patient care is only asked if a case is a healthcare worker or volunteer. The denominator is the number of healthcare workers or volunteers.

***Underlying medical conditions include cardiovascular disease, chronic liver disease, chronic lung disease, chronic renal disease, current or former smoker, diabetes mellitus, immunocompromised condition, neurological and neurodevelopmental conditions, obesity, or other chronic diseases.

The following tables show the demographic characteristics for all COVID-19 cases. Tables 1 and 2 show case counts and severity by demographic categories. Figures 4 and 5 show the case demographic distribution by week of onset. Tables 3 and 4 show race and ethnicity, respectively. Figures 6 and 7 show race and ethnicity by week of onset, respectively.

COVID-19 Weekly Report

Oregon's Weekly Surveillance Summary
Novel Coronavirus (COVID-19)

Oregon Public Health Division

Published July 22, 2020

Recovery

OHA staff periodically call people with reported COVID-19 who experienced fever, cough, shortness of breath or diarrhea and were initially interviewed before May 1, when OHA changed its definition of recovery, to inquire about resolution of symptoms. This group includes 1,885* people who were all diagnosed before mid-April and have not succumbed to their illness. Among these, 1,654 (87.3%) are considered to have recovered, and a recovery date is available for 1,384 people; their time to recovery is depicted in Figure 9. Of these 1,885 people, 41 (2.2%), have not yet recovered; and recovery status is not yet available for 192 (10.1%). People are assumed to have recovered three days after resolution of all symptoms. The median time to recovery among non-hospitalized symptomatic cases is 20 days (interquartile range: 15–29 days); among symptomatic cases who were hospitalized it is 26 days (interquartile range: 18–37 days).

Figure 9. Time to recovery* among symptomatic people** with confirmed COVID-19 (n=1,384)

*Three days after reported resolution of diarrhea, cough, shortness of breath and fever.

** Includes cases who were interviewed about their date of recovery before a change in recovery definition on May

Weekly Care Facility, Senior Living Communities and Congregate Living Settings Report

OHA is publishing data on cases and deaths in care facilities, senior living communities, and congregate living settings that have three or more confirmed COVID-19 cases or one or more deaths (Table 5). Facilities with outbreaks that are considered resolved are moved to the closed outbreak list (Table 6). An outbreak is considered resolved if no new cases are identified for 28 days after the last case onset. This list does not include correctional facilities.

In addition to the facilities listed, OHA is aware of 15 congregate settings of five or fewer beds that have three or more confirmed COVID-19 cases or one or more deaths. Because foster homes typically have relatively few residents, OHA follows the Oregon Department of Human Services practice in not naming these locations to protect patient privacy.

To date, there has been one death of a staff person who worked in a congregate care setting from COVID-19. To protect patient privacy, OHA does not report employee deaths by workplace or other potentially identifying information. Similar information will be released in the future in weekly reports only if OHA determines that such information, in addition to other information it releases, and information released by other agencies, like the Centers for Medicaid and Medicare, cannot be used to identify an individual.

^aCase and death counts include all cases and deaths associated with the outbreak (e.g., staff, residents, close contacts)

Weekly Workplace Outbreak Report

OHA is publishing data on cases in workplace outbreaks. Given a cluster of cases in space and time, within plausible incubation periods for the pathogen, OHA epidemiologists will consider cases to be related—i.e., part of a workplace outbreak—unless a more likely alternative source for acquisition is identified. Any suspected workplace outbreak is required to be reported to the local public health authority (see OAR 333-018-015). Local health department and tribal partners investigate to identify workplace outbreaks. This list of outbreaks will be updated as investigations continue, and we learn about epidemiologic links between cases. This list may not reflect all the workplace outbreaks in Oregon.

To protect privacy, OHA is only reporting workplace outbreaks with five or more cases and only for workplaces with at least 30 employees. If more than 50% of the employees are COVID-19 cases, specific case numbers will not be reported. Case counts include all persons linked to the outbreak, which may include household members and other close contacts. The list below includes active workplace outbreaks (Table 7), meaning that there has been a case within the past 28 days. Outbreaks that are resolved are moved to a separate table of resolved outbreaks (Table 8).

The presence of correctional facilities and food packing and agricultural worksites on this list highlights the challenges of controlling COVID-19 in settings where people must work or live in proximity. People of color are overrepresented in agricultural and correctional settings, contributing to the higher rates of COVID-19 observed in these groups. OHA publishes these data in response to public request, but with some concern that workers or staff members at these workplaces might be subject to discrimination.

State and local public health officials work intensively with staff at workplaces where outbreaks are identified to isolate sick workers, test and quarantine those who have been exposed and implement workplace changes to reduce risk of transmission. Unless otherwise noted, public health officials have determined that these workplaces, their employees and their products do not pose significant risk to the public. Employees of a business with a workplace outbreak should never be subjected to discrimination or excluded from patronizing other businesses. In fact, discriminating against employees or avoiding products might jeopardize the economic viability of essential local businesses.

Novel Coronavirus (COVID-19)

Oregon Public Health Division

Published July 22, 2020

Employers can support their employees with policies that ensure that ill workers are not in the workplace and are not penalized for taking sick leave. Employers should ensure that workers are aware of and understand these policies.

Eight COVID-19 deaths have been associated with the workplace outbreaks below. To protect patient privacy, OHA does not report employee deaths by workplace.

Weekly Schools and Child Care Outbreak Report

OHA is publishing data on cases in school and child care settings. Given a cluster of cases in space and time, within plausible incubation periods for the pathogen, OHA epidemiologists will consider cases to be related—i.e., part of a school or child care outbreak—unless a more likely alternative source for acquisition is identified. Any suspected school or child care outbreak is required to be reported to the local public health authority (see OAR 333-018-015). Local health department and tribal partners investigate to identify outbreaks in these settings. This list of outbreaks will be updated as investigations continue, and as we learn about epidemiologic links between cases. This list may not reflect all of the outbreaks in school and child care settings in Oregon.

To protect patient privacy, OHA is only reporting school and child care outbreaks with five or more cases and only for schools or child care settings with at least 30 students. If more than 50% of the population at the school or child care are COVID-19 cases, then we will not report specific case numbers. Case counts include all persons linked to the outbreak, which may include household members or other close contacts. The list below includes active school and child care outbreaks (Table 9), meaning that there has been a case within the past 28 days. Outbreaks that are resolved will be moved to a separate table of resolved outbreaks. In addition to the facilities listed in Table 9, OHA will report outbreaks in smaller schools and child care in aggregate if the threshold of 5 or more cases is met. To date, there have been two outbreaks of 5 or more cases in a school or child care with fewer than 30 students.

Table 9. Schools and child care facilities reporting COVID-19 outbreaks (n=3).

Facility	Address	County	Investigation start date	Most recent onset	Total cases

Weekly COVID-19 Hospitalizations

OHA is publishing data on the number of COVID-19 hospitalizations by hospital in the prior week; data are from HOSCAP. Table 7 lists all hospitals which, at some time during the week reported, had 10 or more suspected/confirmed COVID-19 patients. The left column shows the highest number of suspected and confirmed COVID-19 hospitalized patients for each hospital between 7/13/2020 and 7/19/2020. The right column shows the highest number of confirmed COVID-19 patients hospitalized during the same time period.

Table 10. Hospitals reporting 10 or more COVID-19 patients.

Hospital	Maximum Patients (Suspected and confirmed)	Maximum Patients (Confirmed only)
Salem Health Hospital	31	20
Providence Portland Medical Center	25	19
OHSU Hospital	24	11
Providence St. Vincent Medical Center	23	15
Legacy Emanuel Medical Center	21	15
Hillsboro Medical Center	20	<10
Legacy Meridian Park Hospital	17	<10
Adventist Health Portland	15	15
Legacy Mount Hood Medical Center	14	<10
Legacy Good Samaritan Medical Center	14	<10
St. Charles Bend	10	<10
Kaiser Permanente Westside Medical Center	10	10
Good Shepherd Health Care System	10	10
Good Samaritan Regional Medical Center	10	<10

The hospitals listed in Table 11 reported 1–9 suspected or confirmed COVID-19 patients between 7/13/2020 through 7/19/2020. Hospitals not listed in either table did not report any suspected or confirmed patients during the week.

Table 11. Hospitals reporting 1–9 COVID-19 patients.

Cases by ZIP Code

OHA is publishing data on cases at the ZIP code level (Table 12). To protect patient privacy, ZIP codes with small populations or small numbers of cases will be aggregated. Cases from ZIP codes with fewer than 1,000 people will be reported as one number. ZIP codes that have fewer than 10 cases will be reported as "1-9". ZIP codes with no cases will have a "0". ZIP code populations were retrieved from the 2010 US Census Bureau ZIP Code Tabulation Area.

Table 12. COVID-19 cases by ZIP code
